

CONSTRUCTION NOTIFICATION:

Hello, Resident!

Fiber Internet Is Coming Soon!

Your neighborhood will soon have access to FastBridge Fiber's future-proof 100% fiber-optic network for fiber internet service!

In construction, the first thing you may notice are temporary paint markings and locate flags that alert our crews of existing utilities. These are there for your safety and ours and are required by law.

Next, you may see contractors working in the area installing our fiber-optic network. Our construction is performed within utility easements or public rights-of-way either on or directly adjoining your property. Construction activities may include trenching, attachments to utility poles, and installation of enclosures within the public rights-of-way or utility easements. In some areas, it may be necessary to access back lot utility pole line easements that run directly behind homes in order to place our facilities.

Our crews will move as quickly as possible and restore disturbed areas to as close to the original condition as we can in line with industry best practices. We aim to minimize the disruption and complete construction quickly to provide you and your neighbors a high-quality, cost-effective, and future-proof internet option.

Questions or concerns? Please contact us at:

COMING SOON TO YOUR NEIGHBORHOOD!

We're building a brand-new fiber-optic network in your neighborhood, which means you'll soon have access to the fastest, most reliable internet around. That's right, no more buffering or slow download and upload speeds – just lightning-fast internet at your fingertips!

Construction can be a hassle, but we promise we'll make it as painless as possible. Our construction crews will be on your street, working on utility poles or underground, but they'll stay in the utility easements and rights of way. If you have utility poles or underground equipment on your property, our crews may need to access them too, and we'll work to get it done quickly and efficiently.

Our goal is to minimize any inconvenience to you, so you can sit back and relax while we do our thing. And when we're done, we'll make sure to restore any affected areas of your yard and neighborhood.

Once the construction is complete, you'll have the option to sign up for our fiber internet service. And trust us, you won't want to miss out on this game-changing technology. With speeds that'll make your head spin, you'll be able to stream, browse, and game like never before.
